Date: November 11, 2017

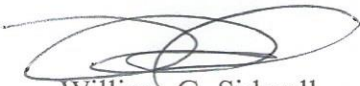

## **Crappie Limit Establishment and Explanation**

**A Crappie (keep) Limit of 5/Person/Day is effective immediately.** The limit was established by the Board of Directors based on shocking (October 30, 2017) to establish aging and proliferation of fish species to identify action needed for health of the lakes. After shocking, the Lake Committee Fish Biologist determined that the crappie fish species is at a significant degradation point (low numbers and age). He therefore recommended that there be a (keep) limit of 5/Person/Day established to help increase the proliferation of the species along with other measures to be taken to hopefully increase spawning efforts and incrementally increase numbers.

All property owners (and guest) are asked to abide by the crappie (keep) limit established of 5/Person/Day to hopefully help improve the species, until further notice. There is a plan to shock and check all species this coming Spring and Fall (2018) to establish a baseline and see where we are. Based on these results and recommendations of the Lake Committee Fish Biologist we will determine the next course of action.

Any property owner (and guest) that chooses to use poor judgment and not abide by the above limit will lose their privileges to fish in all Springbrook lakes for one (1) year. Lost privileges will be posted on the Springbrook website.

For the Board of Directors,

William G. Sidwell  
President
